You guys get me within 500 yds and the whole camp will be eating MOOSE backstrap. ;) OF course closer is always better but I am VERY confident in my equipment and ability to 500 if conditions are right. I have no doubts the animals will be found, thats one of the reasons I booked with you, I hear you guys flat get the job done. Did John Mogle talk to

you about videoing my hunt for CARMS. Also I know it is a little early but have you seen any moose with potential yet.
Joel

Justin nice load. We will have to try it here. We just got back from New Zeland a few weeks ago and man did we have fun. The Outfitter let us shoot all the fallow does we wanted, so of course we tested our rifles from long range. We put a guy that has not hunted very much behind one of our Custom .300 Ultra mags. We coached him a little on what TDS crosshair to use and with one shot at 620 yards down went a really nice Red Stag. The guy was so excited to have made a shot like that. I think making those kind of shots is a blast and with our accurate rifles and great optics like Swarovski shooting at those distances is very doable. justin you should go over there. They are offering some cull hunts for fallow does, get you a tahr while you are there and try some 1,500 yard shots at fallow.. Good times.

Joel you should have a great hunt with Justin. They have some great moose in that area.
